How to use this workbook

This is your flight log for Module 2. You can print it and write on it, or fill it in on screen. There are no grades and nothing to submit. Working through it is what turns a video you watched into a skill you have.

- **Part A: Warm-up reflections.** A few quick questions to loosen the Google habit.
- **Part B: The Cleared To Try task.** The one real activity for this module, built around a task you already do.
- **Part C: Knowledge check.** Ten short questions. Answer key is at the back. No peeking until you've tried.

Intermediate boxes are optional stretch tasks. Skip them your first time through if you're brand new.

The Captain's briefing rule

You signed the Captain's Pledge in Module 1: you command, the crew serves and teaches. This workbook is where that becomes a habit. Every exercise below is you giving a brief, the crew (Claude, ChatGPT, Gemini or Copilot) doing the heavy lifting, and you keeping your own judgement in the cockpit.

The four flight controls, on one page

Keep this open while you work. Almost any request can be built from these four lines, in any order.

Control	The question it answers	Sounds like
Context	What's the situation, and who's involved?	"I'm writing to my strata manager about a leaking gutter they've ignored for two months."
Task	What exactly do you want done?	"Draft a letter asking for a repair date within 14 days."
Format	What shape should the answer take?	"Keep it under 250 words, in three short paragraphs."
Tone	How should it sound?	"Firm but courteous."

Stuck for details? Use the magic sentence

"Before you answer, ask me five questions that would help you do this well."

Part A: Warm-up reflections

Write a sentence or two for each. Honest, short answers are best.

1. What's the last thing you typed into Google?

Just write it as it was, keywords and all. No tidying up.

2. Now rewrite it as a brief to a capable assistant.

Full sentences: the situation, what you want, and why. Feel the difference under your fingers.

3. What's one task you do every week that you'd happily hand over?

e.g. the meal plan, the family email, chasing an invoice, the shopping list...

4. On a scale of 1–10, how confident do you feel about asking AI for what you want?

We asked the same question in Module 1, and we'll ask again at the end of Module 6. Watch the number move.

Intermediate

Pull up your three most recent Google searches and rewrite each one as a full-sentence brief. Keep them: they're the first entries in your prompt library.

Build your brief

Use the weekly task from question 3. Build the brief one control at a time, then assemble it into a single message.

Context: the situation, and who's involved

Task: exactly what you want done

Format: the shape of the answer

Tone: how it should sound

Now assemble it

Read your four lines as one message. Does it sound like a clear brief to a capable assistant? If a line feels unnecessary, drop it: context and task are the essentials, format and tone are the polish. When it reads well, you're ready for Part B.

Part B, Cleared To Try

→ Your task

Pick one task you do every week. Get AI to help you with it. Compare time spent.

Pre-flight checklist, tick as you go

- ☐ I picked one weekly task and noted how long it usually takes me.
- ☐ I built my brief with the four flight controls (or let the AI interview me).
- ☐ I sent it and read the reply slowly.
- ☐ I replied at least once to steer: “shorter”, “warmer”, “more detail”.
- ☐ I asked it to turn my request into a reusable prompt with [blanks].
- ☐ I saved that prompt somewhere I’ll actually look.

Flight log, jot down what happened

The task, and how long it usually takes:

How long it took with the crew helping (include your steering time):

What would you change in the brief next time?

How did that feel? One word is fine.

Intermediate

Take the prompt you saved and refine it across three rounds. After each round, note one thing that improved and why. Then build your library out to five prompts: tricky email, week menu, summarise this, plan an outing, explain it to me, or your own.

Part C: Knowledge check

Ten quick questions. Circle or note your answer. Don't look at the key until you've finished. Getting one wrong is how the lesson sticks.

Q1. A “prompt” is:

- A) A secret command code only experts know
- B) Simply the message you type to an AI tool
- C) A paid feature of the premium versions
- D) A type of error message

Q2. The biggest difference between AI and Google is:

- A) AI is always more accurate
- B) Google is free and AI is not
- C) Google matches keywords to existing pages; AI writes a fresh answer from your brief
- D) There is no real difference

Q3. The four flight controls are:

- A) Speed, height, fuel, weather
- B) Context, task, format, tone
- C) Who, what, when, where
- D) Copy, paste, edit, send

Q4. Which of these is a CONTEXT line?

- A) “I’m writing to my strata manager about a gutter they’ve ignored for two months”
- B) “Keep it under 250 words”
- C) “Make it firm but courteous”
- D) “Draft a letter requesting a repair date”

Q5. You’re not sure what details the AI needs. The best move is:

- A) Give up and do it yourself
- B) Guess, and hope for the best
- C) Cram in every detail you can think of
- D) Ask it to interview you: “ask me five questions first”

Q6. Being vague is the right choice when:

- A) Never; always be as specific as possible
- B) You’re exploring ideas and want lots of options
- C) Facts, dates and budgets matter
- D) You’re correcting a draft that’s nearly right

Q7. The reset rule says:

- A) Restart your computer once a day
- B) Never correct the AI; it knows best
- C) If two fixes haven’t worked, start a new chat and re-brief
- D) Always accept the first answer

Q8. The first answer you get should be treated as:

- A) The finished product
- B) A first draft you reply to and steer
- C) Always wrong
- D) Something to forward straight to your bank

Q9. The “kitchen sink” mistake is:

- A) Using AI for recipes
- B) Asking too politely
- C) Cramming many requests into one message
- D) Using two tools at once

Q10. A prompt library is:

- A) A paid app you need to subscribe to
- B) A simple notes page of prompts that worked, with blanks to fill in
- C) A council building
- D) Something only programmers need

Answer key

Mark your answers, then read the one-line reason. That’s where the learning is.

#	Answer	Why
Q1	B	A prompt is just the message you type. Anyone selling “secret prompts” is selling air.
Q2	C	Google matches existing pages; AI writes fresh, so it needs a brief, not keywords.
Q3	B	Context, task, format, tone. The structure that covers almost any request.
Q4	A	Context is the situation: who you are and what’s going on.
Q5	D	The crew knows what’s usually missing. Let it ask; you just answer.
Q6	B	Vague explores, specific steers. Use vague when you want options.
Q7	C	Two failed fixes means re-brief in a fresh chat, including what went wrong.
Q8	B	First answers are first drafts. Reply and steer; that’s the tool working.
Q9	C	One task per message, then refine step by step.
Q10	B	A notes page of sentences that worked. Nothing technical, nothing to buy.

Your score

8–10: You’re cleared for Module 3. · **5–7:** Solid; reread the four controls table. · **Under 5:** No problem at all; rewatch Lesson 2 and try again. The number is just feedback, not a verdict.
