How to use this workbook

This is your flight log for Module 3. You can print it and write on it, or fill it in on screen. There are no grades and nothing to submit. This module is pick-your-path, so this workbook starts by helping you pick.

- **Part A: Warm-up and path picker.** Find the three paths that match your actual week.
- **Part B: The Cleared To Try task.** One real task from your list, done with the crew.
- **Part C: Knowledge check.** Ten short questions. Answer key at the back. No peeking until you've tried.

The Captain's deal, one more time

In every exercise below, the crew (Claude, ChatGPT, Gemini or Copilot) does the legwork: drafting, condensing, organising, comparing. You do the judging: what to say, what matters, what's true, what gets sent. If you ever notice a decision drifting towards the tool, take it back. That reflex is the skill.

The flight pattern, on one page

Every path in Module 3 runs the same five steps. Keep this open while you work.

Step	What it looks like
1. Brief	Four controls (context, task, format, tone), or the magic sentence: "ask me five questions first".
2. Draft	Let the crew produce the first version. It's a first draft, not a verdict.
3. Steer	"Warmer." "Shorter." "Make the middle paragraph about the refund." Two fixes, then a fresh chat.
4. Verify	The rule of two: any fact you'll act on gets confirmed in one independent place.
5. Decide	Send, sign, book, or bin. This step is yours and never the crew's.

Part A: Warm-up and path picker

Write a sentence or two for each. Honest, short answers are best.

1. List three tasks from this week you'd happily hand the legwork of to a capable assistant.

Aim for a mix: one from home, one from work if you work, one from anywhere. e.g. reply to the school email, summarise the strata minutes, plan Dad's birthday...

2. The "lazy" worry: for each task above, what's the decision that stays yours?

e.g. what the email actually says; whether to sign; which option to book. If every task still has a decision with your name on it, you're not getting lazy, you're getting a crew.

3. On a scale of 1–10, how confident do you feel using AI for real tasks?

Same question as Modules 1 and 2. Watch the number move.

Pick your three paths

Tick the three rows that sound most like your week. Those are your paths for this module; the others will keep.

Tick	Path	Sounds like your week if...
☐	A · Writing: emails, letters, replies	There's an email you've been avoiding for days.
☐	B · Summarising long things	PDFs, minutes and meeting notes pile up unread.
☐	C · Planning trips, events, projects	You're the one who organises everything.
☐	D · Research with verification	You're weighing up a decision or a purchase.
☐	E · Health information, calmly	A diagnosis or a letter left you with questions.
☐	F · Money and admin	Life admin is the job you dodge the longest.

My three paths: _____

Intermediate

Choose your three paths so at least one is from your work life and one from home. Capability that lives in both places sticks twice as fast, because you get twice the practice for free.

Part B, Cleared To Try

→ Your task

Pick one task from any path. Do it with AI. Notice what changed.

Pre-flight checklist, tick as you go

- ☐ I picked a real task that was already on my list this week.
- ☐ I briefed with the four controls, or let the crew interview me.
- ☐ I steered the draft at least once instead of settling for draft one.
- ☐ I verified anything factual in one independent place (rule of two).
- ☐ I made the final decision myself: send, sign, book, or bin.
- ☐ I saved the prompt to my library if it earned it.

Flight log, jot down what happened

The task, and which path it came from:

What changed? Time saved, quality, or just “the dreaded thing is done”:

What decision stayed yours, and did anything try to drift to the tool?

How did that feel? One word is fine.

Intermediate

Chain two paths in one conversation (summarise the document, then draft the reply; or plan the event, then draft the invitations). Then add a verification step to whichever path you chained: note below what you checked and where.

Part C: Knowledge check

Ten quick questions. Circle or note your answer. Don't look at the key until you've finished. Getting one wrong is how the lesson sticks.

Q1. The right way to use the six paths in this module is:

- A) Do all six in one sitting, in order
- B) Pick the three that match your actual week and do those properly
- C) Only do Path A; the rest are optional extras
- D) Wait until you feel expert before trying any

Q2. The flight pattern is:

- A) Brief, draft, steer, verify, decide
- B) Search, copy, paste, send
- C) Ask, accept, forward
- D) Plan, panic, postpone

Q3. In the Captain's deal, the crew does the legwork and you do:

- A) The typing
- B) The judging: what matters, what's true, what gets sent
- C) Nothing at all
- D) The apologising

Q4. Before sending an AI-drafted email, you should:

- A) Send it immediately while it's fresh
- B) Add more exclamation marks
- C) Read it aloud, edit at least one thing, and never send a word you wouldn't say
- D) Forward it to a friend for approval

Q5. "A summary is a map, not the territory" means:

- A) Summaries are useless
- B) For anything binding, read the flagged clauses in the original before signing
- C) Always sign quickly before the details change
- D) Maps are more reliable than documents

Q6. The rule of two says:

- A) Always ask two AI tools and average the answers
- B) Any fact you'll act on gets confirmed in one independent place, ideally official
- C) Never check anything twice
- D) Only research on Tuesdays

Q7. The health rule is:

- A) AI explains; doctors decide
- B) AI can diagnose if you describe symptoms well
- C) AI is fine for medication doses
- D) Never mention health to an AI in any form

Q8. With budgets and money tasks, AI's known weak spot is:

- A) Spelling
- B) Being too cautious
- C) Arithmetic: check the sums yourself
- D) Refusing to help

Q9. Pasting confidential work documents into an AI tool is:

- A) Always fine; nobody will know
- B) Only OK in tools your workplace has approved; when in doubt, ask first
- C) Required by most employers
- D) Fine if you delete the chat afterwards

Q10. “Chaining” tasks means:

- A) Asking the same question repeatedly
- B) Linking tasks in one conversation: summarise, then draft the reply
- C) Using AI while exercising
- D) Copying answers between tools

Answer key

Mark your answers, then read the one-line reason. That’s where the learning is.

#	Answer	Why
Q1	B	Capability comes from repetition on real tasks, not coverage of all six.
Q2	A	Brief, draft, steer, verify, decide. The last two steps are always yours.
Q3	B	Legwork is the crew’s job; judgement is the Captain’s. That deal never changes.
Q4	C	Reading aloud and editing keeps your voice, and keeps you the author.
Q5	B	The summary tells you where to look, not what to sign.
Q6	B	One independent check is the difference between informed and confidently misinformed.
Q7	A	Explaining and preparing questions, yes. Diagnosis, doses and “should I see someone”, never.
Q8	C	It builds lovely structures and occasionally adds them up wrongly. Calculator time.
Q9	B	Your employer’s rules outrank this course. Approved tools or ask first.
Q10	B	Summarise → decide → draft in one chat is the everyday rhythm of crew work.

Your score

8–10: You’re cleared for Module 4. · **5–7:** Solid; reread the flight pattern page. · **Under 5:** No problem at all; rewatch your three chosen paths and try again. The number is just feedback, not a verdict.
