Contents

How to use this workbook

This is your flight log for Module 5, and parts of it are built to outlive the course: the never-share list and your verification checklist are made to be printed and kept. There are no grades and nothing to submit.

- **Part A: Warm-up reflections.** Name the horror story so we can defuse it.
- **Part B: The Cleared To Try trust tests.** Catch your own tool being wrong, three times, on purpose.
- **Part C: Your keep-forever pages.** The scam radar card, the never-share list, your checklist, and the family safe word.
- **Part D: Knowledge check.** Ten short questions. Answer key at the back. No peeking until you've tried.

Alert, not anxious

You're still the Captain; this module just adds the instrument checks. The crew (Claude, ChatGPT, Gemini, Copilot) keeps doing the legwork. You add three calm habits: ask for sources, pause anything urgent, and keep the never-share list. Caution is part of confidence, not its opposite.

Part A: Warm-up reflections

Write a sentence or two for each. Honest, short answers are best.

1. What's the AI or scam horror story you've heard that sticks with you?

Write it down in one or two lines. Naming it is the first step to defusing it; by the end of the module, come back and note which lesson covers it.

2. What would actually hurt to lose: money, identity, photos, peace of mind?

Knowing what you're protecting makes the habits feel like care, not chores.

3. On a scale of 1–10, how confident are you that you'd spot a scam aimed at you?

Answer now, then again after Part B. This number usually jumps.

Intermediate

Ask the people closest to you question 1 this week. Their answers tell you which lesson of this module to share with them, and sharing it makes you the family's safety officer.

Part B, Cleared To Try: the three trust tests

→ Your task

Run three trust tests on your tool. Catch it being wrong. Build the muscle.

Test 1: Home ground

Ask about something you know deeply: your trade, your town, your era, your team. Read closely until you find the error or the too-smooth bit. There's nearly always something.

What I asked:

What it got wrong (or suspiciously smooth):

Test 2: Show your sources

Ask a factual question and add: "Give me your sources." Then check ONE source by the rule of two. Did the source exist? Did it say what the AI claimed?

What I asked, and the source I checked:

Verdict (held up / got vaguer / source didn't exist):

Test 3: The false premise

Ask about something that never happened (“tell me about the 1987 Sydney earthquake that damaged the Opera House”). Does it correct you, or write you a history?

My false premise, and what it did:

What just happened

You caught the tool being wrong, on purpose, calmly. That's the exact muscle that protects you everywhere: tone-immunity. Re-answer warm-up question 3 now and watch the number move.

Intermediate

Run the calibration game from Lesson 2: ten factual questions on home ground, mark each “trust” or “verify” before checking, then score your own radar, not the AI.

Part C: Keep-forever pages

The scam radar card

Five scams, one motor. Print this page; the table is the card.

The scam	The tell	The defence
Voice clone / grandparent call	A loved one's voice, urgent and secret, needing money.	Hang up; call back on the number you already have; ask for the safe word.
Romance scam	Warm, patient, never quite meets you; then a crisis needing money.	Never send money to someone you haven't met. Tell one trusted person.
Fake invoice	Perfect-looking bill or "updated bank details" by email.	Phone the company or tradie on the number you already have, never the one in the email.
Deepfake video	A celebrity letting you in on an investment.	Celebrities don't need you in their scheme. Money + video = scam until proven otherwise.
The urgency engine	Act now. Keep it secret. Don't hang up.	Urgency is the tell. "I'll call you back tomorrow" defeats almost everything.

If something gets through

No shame, fast action: your bank first (they can sometimes stop transfers), then Scamwatch (scamwatch.gov.au), then IDCARE (idcare.org) for identity worries. Then tell someone you trust. The only mistake that compounds is the one kept secret.

My family safe word

Agree one unusual word with your family this week. Any distressed phone call asking for money gets asked for it. Write a hint here (not the word itself, this page might travel):

Date we agreed it, and who knows it:

The never-share list (postcard test)

Before pasting anything into an AI chat: "Would I write this on a postcard to a well-meaning stranger?"

- ☐ Passwords and PINs: never, in any form.
- ☐ Full bank, card or account numbers: never.
- ☐ Tax file, Medicare, passport, licence numbers: never.
- ☐ Other people's personal details (kids, friends, clients, patients): never.
- ☐ Live legal disputes: solicitor first, always.

- ☐ Work documents: only in tools my workplace has approved.

My verification checklist

Five lines, in your own words. Writing it yourself is what makes it automatic later. Cover: facts, invoices, calls, relationships, investments.

Part D: Knowledge check

Ten quick questions. Circle or note your answer. Don't look at the key until you've finished.

Q1. A hallucination is:

- A) A rude answer from the AI
- B) Plausible-sounding but false content, stated with confidence
- C) A type of computer virus
- D) A privacy setting

Q2. Confidence in an AI answer is:

- A) Proof it's correct
- B) A writing style, not a truth signal
- C) A sign of the paid version
- D) A reason to trust it with money

Q3. The best everyday way to catch a hallucination is:

- A) Argue with the AI until it apologises
- B) Trust answers that sound smooth
- C) Ask for sources and check one independently (rule of two)
- D) Only use AI on weekends

Q4. A distressed call in a loved one's voice asks for urgent, secret money. You:

- A) Transfer quickly; they sounded real
- B) Hang up, call them back on the number you already have, ask for the safe word
- C) Keep it secret as asked
- D) Email the money instead

Q5. The rule for online romances is:

- A) Video calls prove someone is real
- B) Never send money to someone you haven't met in person, and tell one trusted person
- C) Money requests are normal after three months
- D) AI photos are easy to spot, so don't worry

Q6. An email from your builder says their bank details have changed. You:

- A) Pay the new account; the email looks right
- B) Reply to the email to double-check
- C) Phone them on the number you already have before paying a cent
- D) Pay half to be safe

Q7. Under the Privacy Act, you can:

- A) Ask what an organisation holds about you, correct it, and complain to the OAIC for free
- B) Demand any company delete the internet
- C) Only complain through a lawyer
- D) Nothing; it doesn't apply to individuals

Q8. Which of these can go into an AI chat?

- A) Your tax file number

- B) A friend's medical situation, with their name
- C) A draft letter and a question about wording
- D) Your banking password, if asked nicely

Q9. The common motor inside almost every scam is:

- A) Bad spelling
- B) Urgency and secrecy: act now, tell no one
- C) Foreign phone numbers
- D) Requests in writing

Q10. The trust, verify, walk away ladder says verify when:

- A) Never; verifying is rude
- B) You'll act on a fact, with money, health and legal getting a human expert too
- C) Only when the AI seems nervous
- D) Someone tells you to hurry

Answer key

Mark your answers, then read the one-line reason. That's where the learning is.

#	Answer	Why
Q1	B	Plausible is not true. There's no fact-checker inside, only a predictor.
Q2	B	It learned from confident prose. Judge on tells, not tone.
Q3	C	A real fact survives the source question; an invented one wilts.
Q4	B	Hang up, known number, safe word. Urgency plus secrecy is the tell.
Q5	B	Cons die in daylight. Money to someone never met is the line.
Q6	C	Changed bank details get a phone call, never a reply to the email.
Q7	A	Ask, correct, be notified of serious breaches, complain free to the OAIC.
Q8	C	Drafts and questions are the everyday cargo; identity numbers never.
Q9	B	Whatever the costume, the motor is urgency. Pauses defeat it.
Q10	B	Low-stakes shaping: trust. Facts you act on: verify. Pressure: walk away.

Your score

8–10: You're cleared for Module 6, the final approach. · **5–7:** Solid; reread the scam radar card. · **Under 5:** No problem at all; rewatch Lessons 3 and 6 and try again. The number is just feedback, not a verdict.
